

An RMG Industry Intelligence Report

Bangladesh Ready-Made Garments | 2022 – 2024

Prepared by: Md. Sirajul Islam
Tool: Microsoft Power BI
Dataset: 9,75,440 Rows (Custom-Built)
Portfolio: github.com/sirajul-islam5

TOTAL ORDERS	TIME PERIOD	TOOL	PAGES
9,75,440	2022 – 2024	Power BI	3 Pages

PROJECT SUMMARY

This report analyzes production performance, shipment efficiency, factory output, defect rates, and buyer country trends across Bangladesh's RMG sector from 2022 to 2024.

Table of Contents

01	Project Context	
02	Dataset Overview	
03	Performance Overview	
04	Regional Analysis	
05	Production Review	
06	Conclusion	

SECTION 01

Project Context

Bangladesh is the second largest garment exporter in the world, contributing significantly to global apparel supply chains. Despite its scale, data-driven decision-making in the RMG sector remains limited. This project simulates a real-world analytics scenario to demonstrate how production, shipment, and quality data can drive operational clarity.

Objective

To analyze order fulfillment, shipment performance, factory productivity, defect rates, and buyer country trends across Bangladesh's RMG sector from 2022 to 2024.

SECTION 02

Dataset Overview

This project uses a custom-built dataset of **9,75,440 rows** — not sourced from Kaggle or any public repository. The dataset was intentionally designed to reflect realistic RMG industry patterns.

TOTAL ROWS
9,75,440

TIME PERIOD
2022 – 2024

TOTAL COLUMNS
12

Columns Included

Order_ID	Factory_Name	Buyer_Country	Product_Category	Order_Date	Shipment_Date
Delivery_Deadline	Quantity_Ordered	Defect_Rate_%	Shipment_Status	Season	Division

Transparency Note

This dataset was custom-generated for portfolio demonstration purposes. All factory names, buyer patterns, and performance metrics are simulated but based on realistic industry benchmarks. No real company data was used.

SECTION 03

Performance Overview

TOTAL ORDERS	ON-TIME RATE	AVG DEFECT RATE	TOTAL QUANTITY
975K	64.88%	4.50%	25 bn

Shipment Trends (2022–2024)

Across all three years, total orders consistently hovered around 975,440, with no single year showing a dramatic spike or drop. This signals a stable but stagnant order pipeline — growth opportunities remain untapped.

RECOMMENDATION

Factory management should focus on order volume diversification across buyer countries to reduce dependency concentration.

On-Time Shipment Rate

The overall on-time shipment rate stands at **64.88%** — meaning roughly 35 out of every 100 orders face delays. For a globally competitive industry, this is a significant operational gap.

RECOMMENDATION

Factories with consistent delay patterns should be reviewed for production scheduling inefficiencies.

Average Defect Rate

The average defect rate across all orders is **4.50%**. While this may appear low in isolation, at a scale of 9,75,440 orders, even a 1% defect rate represents thousands of affected shipments.

RECOMMENDATION

Product categories with above-average defect rates require dedicated quality control intervention.

Seasonal Patterns

Order volume distribution across Spring, Summer, Fall, and Winter seasons shows relatively even spread. No single season dominates, suggesting year-round production activity — a positive signal for factory workforce stability.

SECTION 04

Regional Analysis

TOP BUYER

USA

TOTAL SHIPMENTS

975k

AVG DEL DAYS

59.99

Top Buyer Country

The **USA** leads as the top buyer country by order volume, followed by the UK and Germany. This mirrors real-world RMG export patterns where North American and European markets dominate Bangladesh's garment exports.

RECOMMENDATION

Factories should build stronger compliance infrastructure (fire safety, labor standards) aligned with USA and EU buyer requirements.

Geographic Spread

Buyer countries are distributed across North America, Europe, and Australia — with no significant presence from Asian buyers. This reflects Bangladesh's typical positioning as a supplier to Western fast-fashion markets.

Average Delivery Days

The average time from order to shipment is approximately **59.99 days**. This two-month lead time is standard for RMG but leaves limited buffer for delay recovery when disruptions occur.

RECOMMENDATION

Factories targeting premium buyers should work toward reducing lead time to under 45 days to remain competitive.

Shipment Status by Country

On-time performance varies across buyer countries. Some countries show a higher proportion of delayed shipments — indicating that certain buyer relationships may face compliance or relationship risks if delivery reliability is not improved.

SECTION 05

Production Review

TOP FACTORY

Starlight Garments

TOP PRODUCT

T-Shirt

DIVISIONS

6

Top Performing Factory

Starlight Garments emerges as the top factory by order volume. However, volume alone does not define performance — defect rate and on-time delivery must be evaluated together for a complete picture.

RECOMMENDATION

High-volume factories should be benchmarked against defect rate and on-time delivery to identify true top performers.

Most Ordered Product

T-Shirts dominate order volume — consistent with Bangladesh's global reputation as the world's leading T-shirt manufacturer. Knitwear and Denim Jeans follow as the next major categories.

Defect Rate by Product Category

Defect rates are relatively consistent across product categories, ranging narrowly between 4.49% and 4.51%. This uniformity suggests systemic quality issues rather than category-specific problems — pointing toward factory-level process standardization as the root cause.

RECOMMENDATION

A factory-wide quality audit focusing on cutting, stitching, and finishing processes would yield more improvement than category-specific interventions.

Order Volume by Division

Orders are distributed across six divisions — Dhaka, Chattogram, Gazipur, Narayanganj, Mymensingh, and Sylhet — with relatively even distribution around 162,000 to 163,000 orders each. This geographic spread indicates no single division dominates production capacity.

SECTION 06

Conclusion

This analysis of Bangladesh's RMG industry across **9,75,440 orders** from 2022 to 2024 reveals three core challenges that require immediate data-driven attention:

01	Delivery Reliability Only 64.88% of shipments are on time — a serious concern for buyer retention in competitive global markets.
02	Quality Consistency A 4.50% average defect rate at this scale means tens of thousands of defective shipments annually.
03	Export Concentration Over-reliance on the USA and a handful of European buyers creates vulnerability to geopolitical and trade policy shifts.

Addressing these three areas through data-driven operational improvements would significantly strengthen Bangladesh's position as a preferred sourcing destination in global apparel markets.
